

FREE Machine Database Software Upgrade

Improve your machine by adding a 500 item product set-up database system

barwell Upgrades 
Be safe | Modernize | Improve

Features

- 500 item product database
- Alphanumeric set-up name (up to 16 characters)
- Simple search and select facility
- Ability to add, delete and modify entries
- Manual set-up entry or mass upload from file
- Inclusion of hour clock for monitoring production levels
- Warning error message alert banner to assist with problem solving

If you have one of the following Barwell Performers - **supplied before August 2016** - we can now update your machine, so that you will be able to save product set-ups, all via your touch screen user-interface.

This valuable enhancement can be provided 'free of charge', when combined with a preventative maintenance visit by a Barwell engineer.

Previously the ability to save set-ups was only available on the ECO Plus range of performers, but we have now developed a facility for standard machines to include a basic product database system, simplifying processing and machine set-up.

The update means the operator will no longer have to manually enter the blank weight, cutter speed, and valve settings* each time a new batch is run. The appropriate products are simply selected from a pre-stored list.

This new feature eradicates operator input errors and means there is no need to locate the required settings from either a production manual or work order sheet.

*valve setting only automatic on ECO machines

- Any upgraded ECO, C2, C3, MR400 or MIDI
- Any C3 or MIDI rebuild with 5" touch screen user-interface
- Any standard ECO machine with a 5" user-interface

Operators will have the ability to easily find a set-up and can also modify it.

In addition, the update to the software will add a production hour clock counter, and also a simple message banner, advising operators of common issues, which could be preventing the machine from functioning.

This latest Barwell product enhancement not only makes operation simpler and quicker but also helps to prevent unnecessary production delays.

Contact us to arrange your upgrade with a service visit.

Note: this feature is now standard on all Barwell rebuilds, upgrades, and standard ECO machines. If your machine has a 3" monochrome NQ3 screen, we can also upgrade your machine, however, you will need to replace the screen with a 5" color screen and there will be a charge for this. Contact us for details.
